

New Torch Tip for Smaller Targets

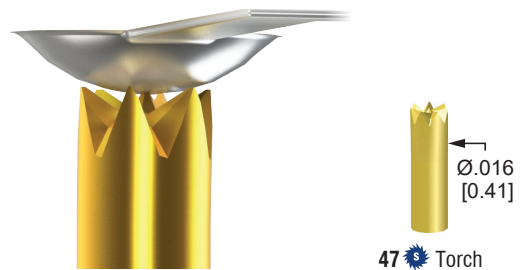

The QA Technology 47 tip style is now available in our 039-40 & X31-40 long stroke series, making it ideal for probing small test pads or vias with domes of solder.

The steel torch tip is recommended for tough-to-probe applications, such as no-clean flux processes. The sharp radial cutting edges and sharp center point minimizes the contact area, while the self-cleaning design forces flux away from the cutting edges.

Thanks,

The QA Team

TORCH

The 47 (Torch) tip style is now available in our 039-40 & X31-40 series.
