

QA Technology is always striving to offer you the best products for any test challenge you may experience. We have added the 8R Razor tip style to our .039 [1.00] Conventional and X31 Socketless, .400 [10.16] long stroke probes series. This 150° shallow angle Razor is designed to contact filled or solder pasted VIAS reducing the chance of being blocked by a pool of flux.

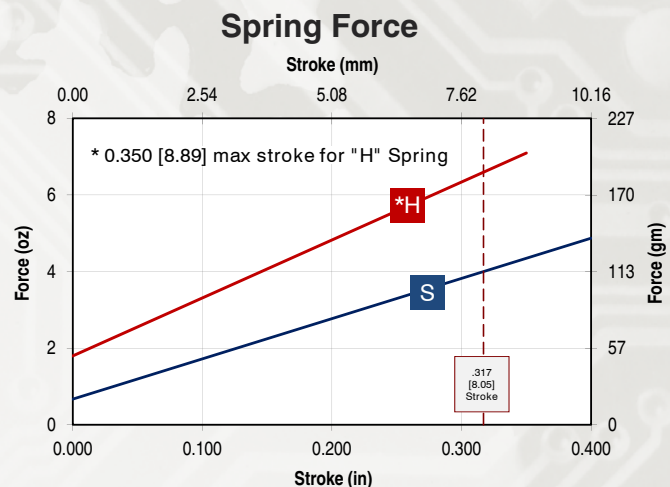

In conjunction with this new tip style and today's demand for a higher spring forces, QA is also pleased to add a new "H" High Spring. This new 6.0 oz [170gm] spring gives another option for your specific application. Higher spring forces paired with a proper tip style can increase your first pass yields and reduce false failures with hard to test board processes.

039-PRP40 ■ ■ -S
X31-PRP40 ■ ■ -S

Letter	Preload	@ .317 [8.05] Stroke	Material	Cycle Life @ Stroke
S	.7 [20]	4.0 [113]	SS	50K
H*	1.8 [51]	6.0 [710]	SS	50K

**Full Stroke for H spring is .350 [8.89]*

All dimensions are in inches [mm]. All spring forces are in ounces [gms].
