

# New Adjustable Tool for 125mil (125-25 Series) Sockets

QA Technology's adjustable installation tools offer a convenient method to install sockets at any set height, from flush to the maximum possible for a particular socket.

Adding to our existing 100mil, 75mil and 50mil tools, the new 125mil tool is designed for our 125-25 series sockets, and has a set height range of flush to 0.250 (6.35). Each tool is available in both English & metric.

The set height is easily adjusted via a built-in micrometer and locked at the desired height. Because the set height can be changed, the tool can be reused as often as needed.

Thanks,

**The QA Team**
