

Heat Shrinkable Insulating Tubing

QA Part Number INS046-6

For wire wrap and wire jack sockets and termination pins on 0.050" [1.27mm] centers and smaller, QA Technology now offers heat shrinkable insulating tubing. Using the tubing on every other connection prevents adjacent sockets from shorting together.

Available in blue 24" [610 mm] lengths, this tubing is stiffer than other types, making installation easier. Cut lengths to completely cover the wire wrap or wire jack applications.

The blue tubing helps identify progress during the insulation operation. Shrinking the tubing with a heat gun is recommended but not essential.

Finished assembly showing heat shrunk insulating tubing on alternate posts.

INSTALLATION INSTRUCTIONS

For detailed installation instructions, including wire wrapping and unwrapping procedures, see our [Application Note](#).

ORDERING

Order INS046-6 Heat Shrinkable Tubing [here](#).

Tubing is available in blue 24" [610 mm] lengths, and easily cut to the correct size.
