

For ease of selection and to identify the proper replacement probe, QA Technology is now featuring a laser-marked identification method on our 125, 156 and 187 probe series.

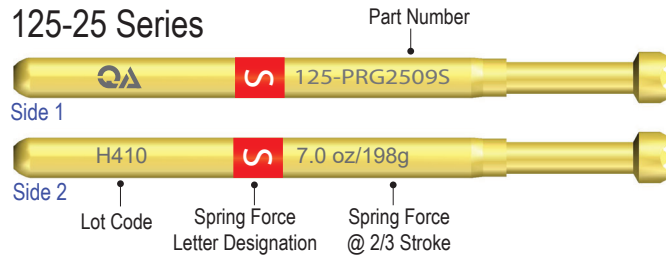

This system will easily identify the exact part number for probe replacement during regular scheduled maintenance.

This identification includes:

- Complete part number
- Spring force at 2/3 stroke (oz/g)
- **NEW** QA signature color banded codes with the spring force letter designation.
- Manufacturing lot code for traceability.

This improved identification method is being phased in. Future shipments may include some inventory with the older marking style until this stock is depleted.

125-25 Series

156-25 Series

187-25 Series

Tube	Material	Color Marking
N	Nickel Silver; No Finish	RED
G	Nickel Silver; Gold Plated	RED
H	High Conductivity Alloy; Gold Plated	BLACK
S	High Conductivity Alloy; Silver Plated	BLACK
