

With today's complex printed circuit board processes, QA Technology continually works with customers to develop new solutions for contact challenges in their test environments.

Our new "N6" Star tip style is now available in our 100-25 and X75-25 series. This self-cleaning tip style is designed with 6 sharp edges to aggressively contact test pads and penetrate through heavy flux and contamination on thru-holes or vias.

100-25 & X75-25 Series ~ .250 [6.35] Full Stroke
