

Probe Identification

Positive ID

New laser markings will now be featured on our 75-mil and X50 probe series. Complete probe specifications can easily be identified to help with new fixture builds and to ensure exact replacement during regularly scheduled maintenance.

This improved identification method is being phased in. Future shipments may include some inventory with the older marking style until this stock is depleted.

Tube	Material/Finish	Color Marking
P	Nickel Silver/ID precious metal clad	BLUE
N	Nickel Silver; no finish	RED
G	Nickel Silver; Gold plated	RED
